Arenarin prepared from Immortelle Helichrysum
arenarium obtained from different, not necessarily
remote, areas at the same stage of its growth is dif-
ferent in antibacterial activity. Arenarin is most
active when obtained from Immortelle found in sunny
areas. The most active Arenarin is obtained from

flower heads of immortal gathered during the stage of full bloom; Arenarin obtained from deflorate plants has little activity. The acids, phenols and resins contained in Arenarin have the strongest antibacterial effect on Cor. michiganense 555. The essential oil plays a significant role in the activity of the preparation, although it is less active than the above fractions, its activity is constant, and it makes up a large part of the substance Arenarin. The pigment fraction has rather low antibacterial activity. Ether and alcoholic preparations of Arenarin are not identical in composition.
